

1. Download and install Android Studio.

<https://developer.android.com/studio>

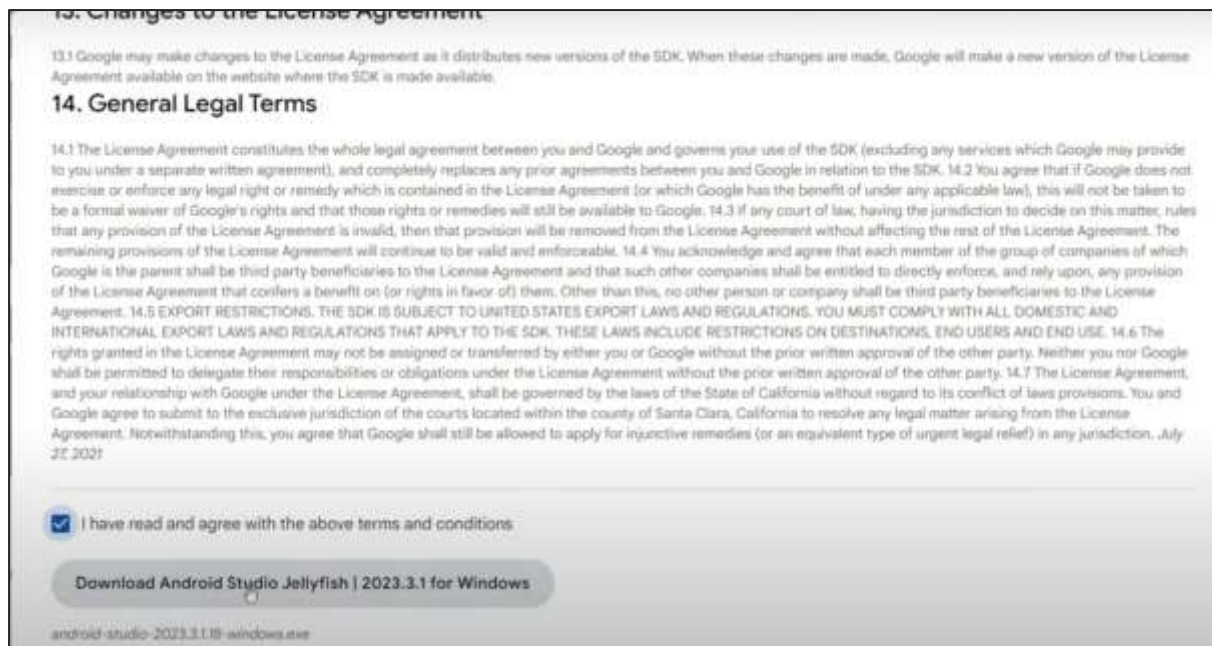

To download Android Studio on **macOS** or **Linux**:

<https://developer.android.com/codelabs/basic-android-kotlin-compose-install-android-studio#4>

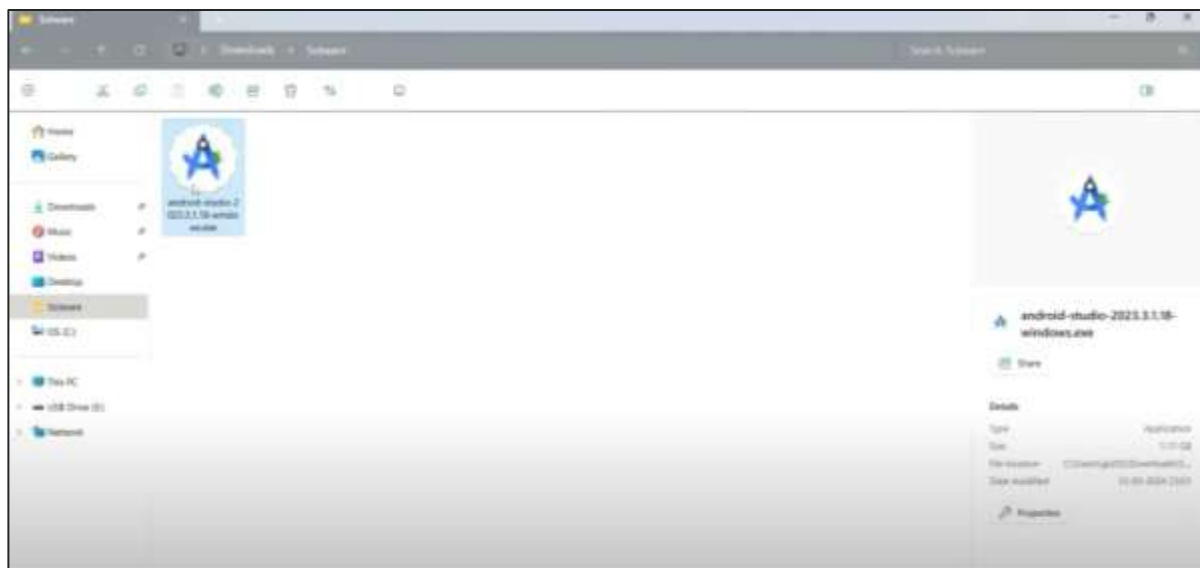

2. Once the website is loaded, click on the **Download Android Studio** button.

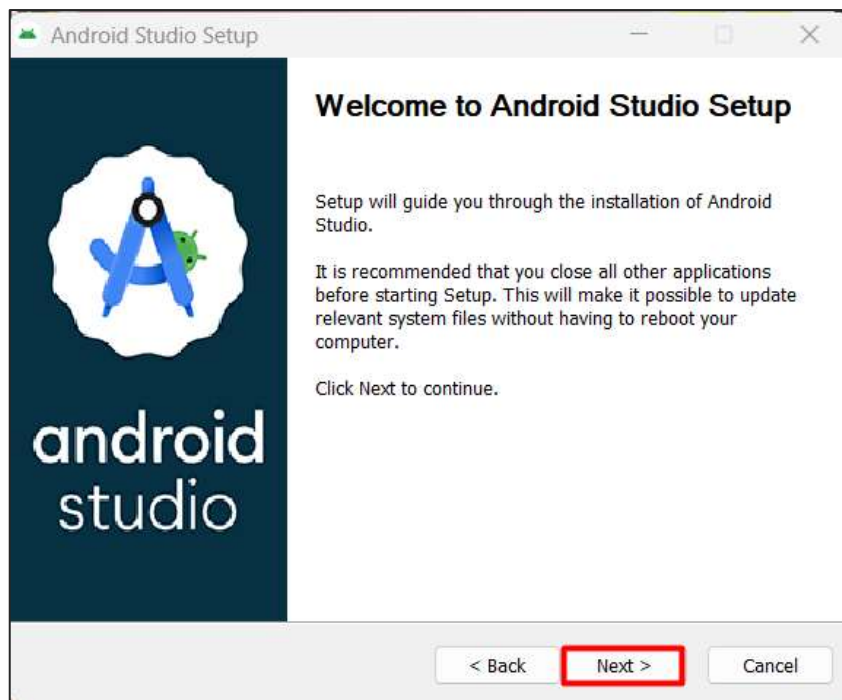

3. Once you click on the download button a pop-up will appear asking you to agree to the terms and conditions.
4. Carefully read them, scroll to the bottom of the list, and check the box that says; I have read and agree with the above terms and conditions button.

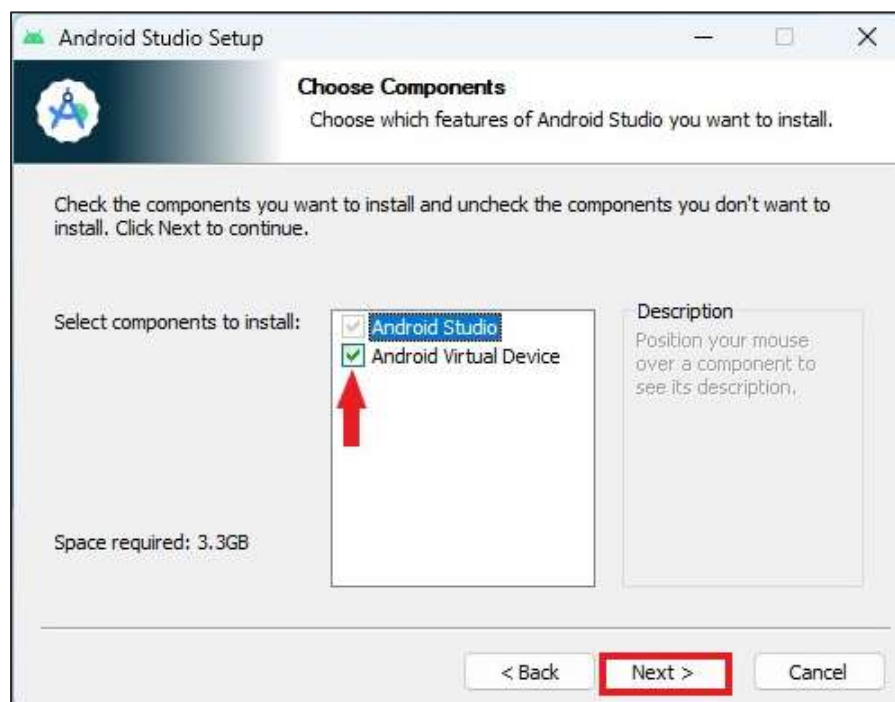

5. Once downloaded, open the executable file by double-clicking on it and follow the on-screen instructions for a hassle-free installation. Here, click on the Next button to continue with the installation.

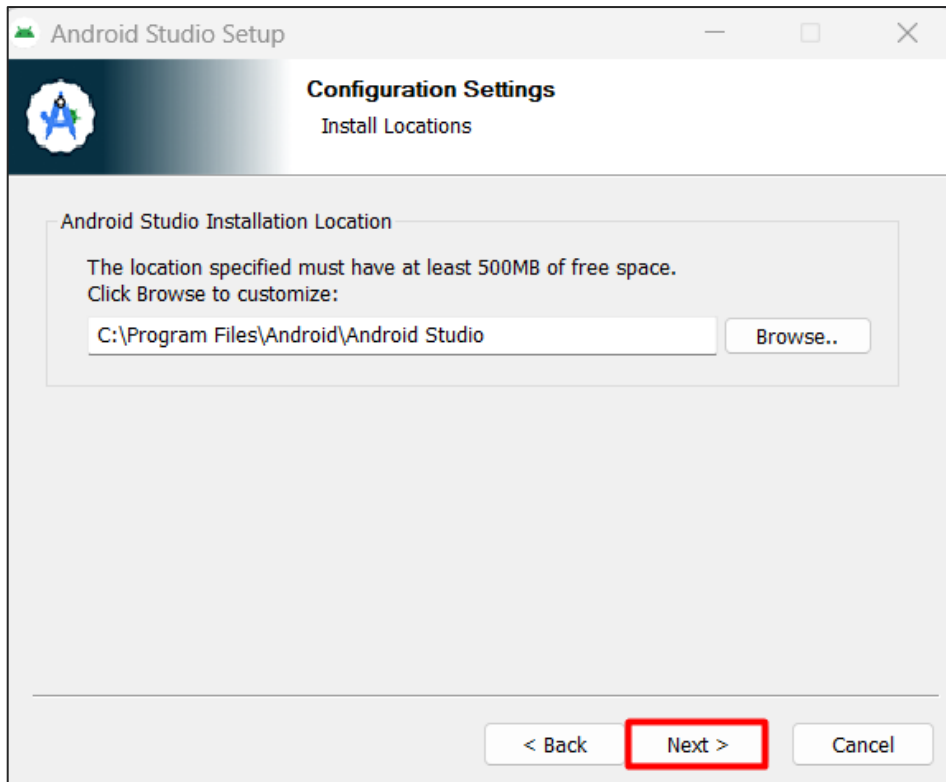

6. The first step in the installation wizard is to Choose Components. By default, the only component selected is the Android Virtual Device, which is required for running and testing your Android apps on an emulator.

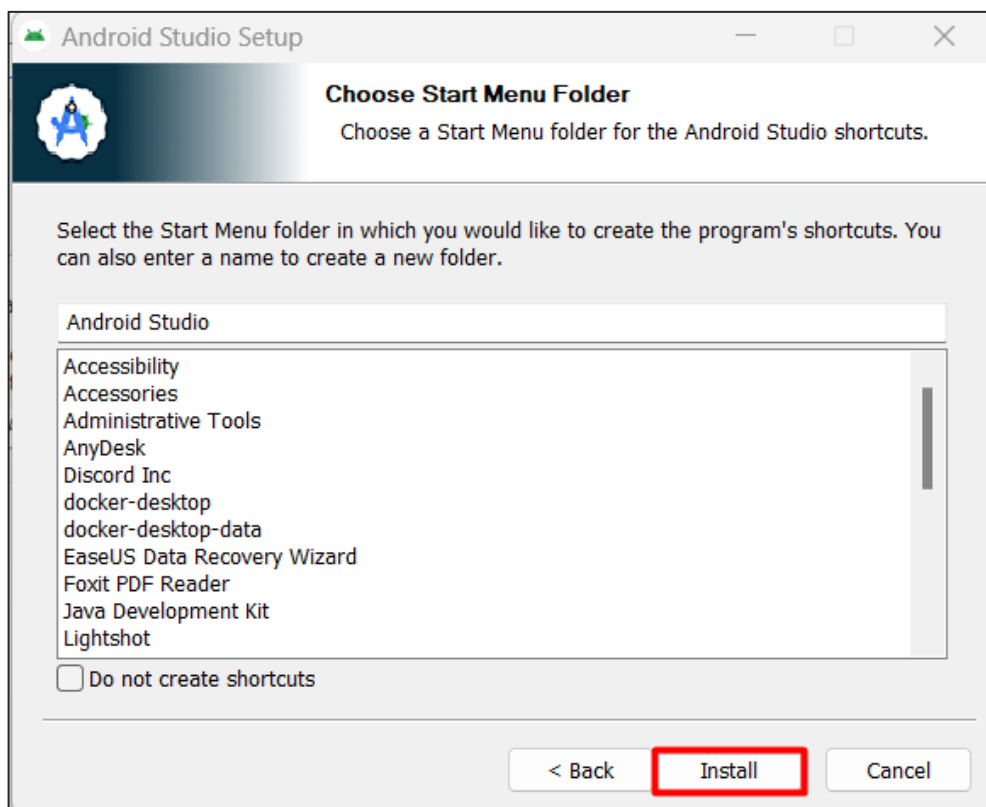

7. If you are directly using your mobile phone uncheck the **Android virtual device**. Now, click on the **Next** button to continue.

8. After that, select the installation location for Android Studio on your Windows 11 PC. Alternatively, you can keep it as the default and then click on the **Next** button.

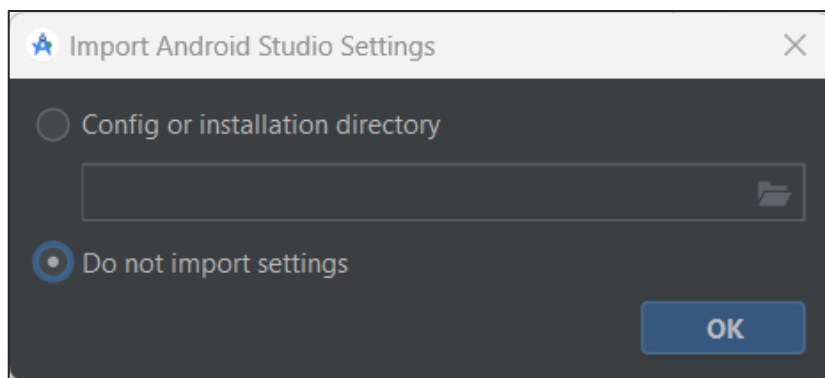

9. Choose the Start Menu Folder and **Install**

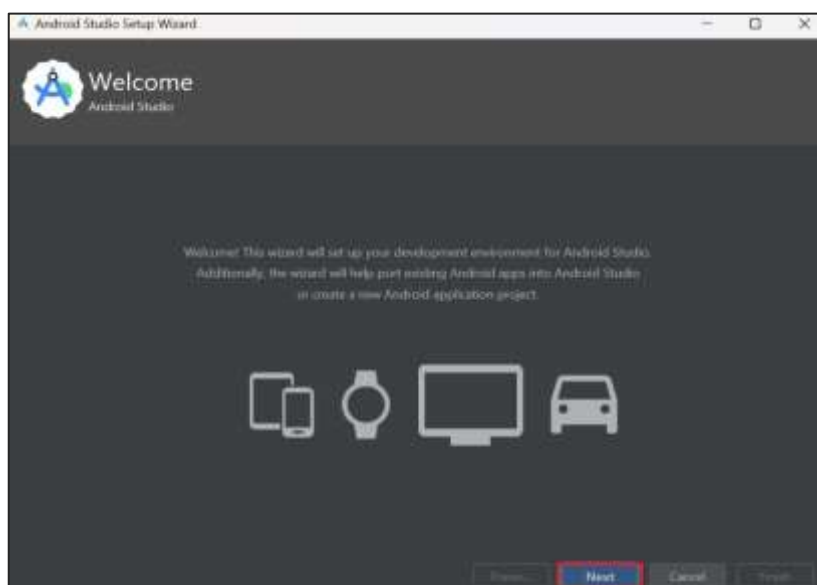

10. Complete the Installation

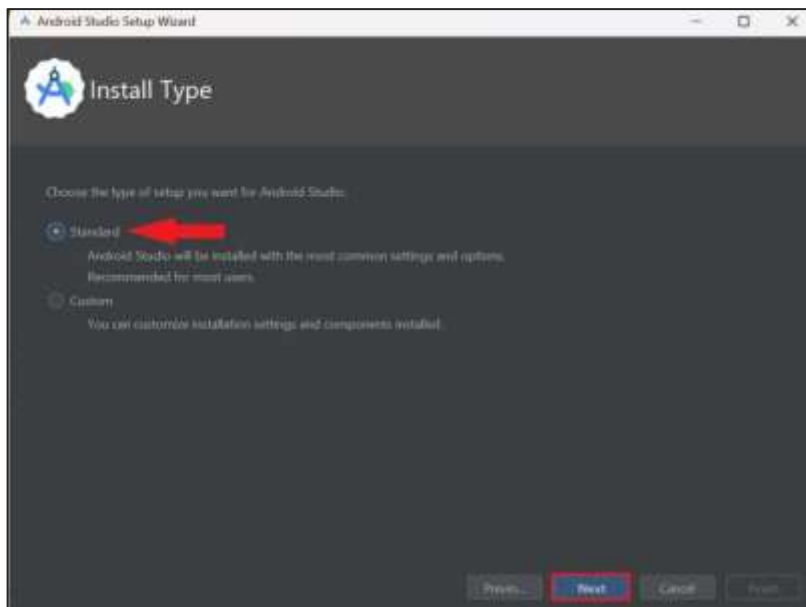

11. Straight after the Android Studio launches, you will be asked whether you want to import any previous settings or not. If this is your first time select the second option and click on the **OK** button.

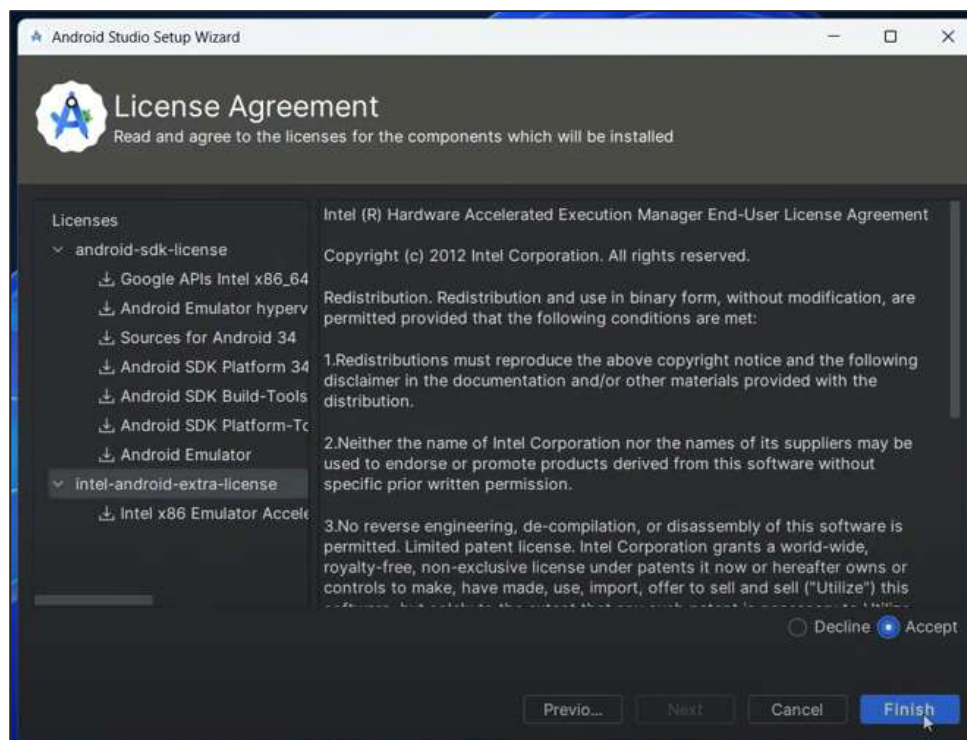

12. You will now see the Welcome screen, click **Next** to move further.

13. Now, you will be asked to select the **Install Type**. You can choose the custom settings to modify your installation, but it is suggested to go with standard settings for most users. Once selected, click the **Next** button.

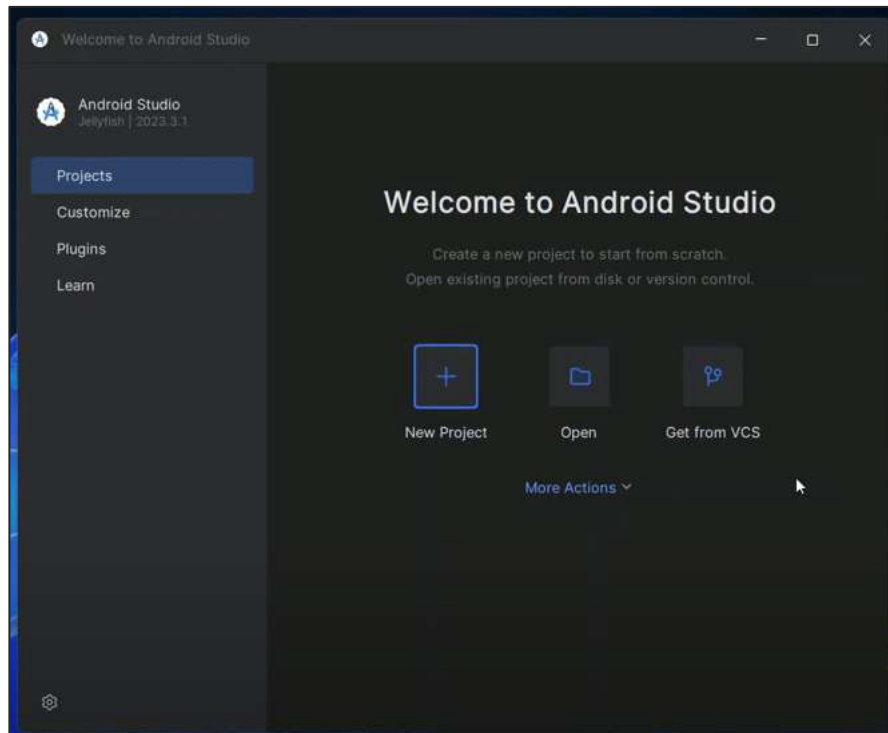

14. Now, carefully review the Terms and Conditions, and select **Accept** for both the `android-sdk-license` and `android-sdk-preview-license`. Then, click the **Finish** button to proceed with the Android Studio configuration.

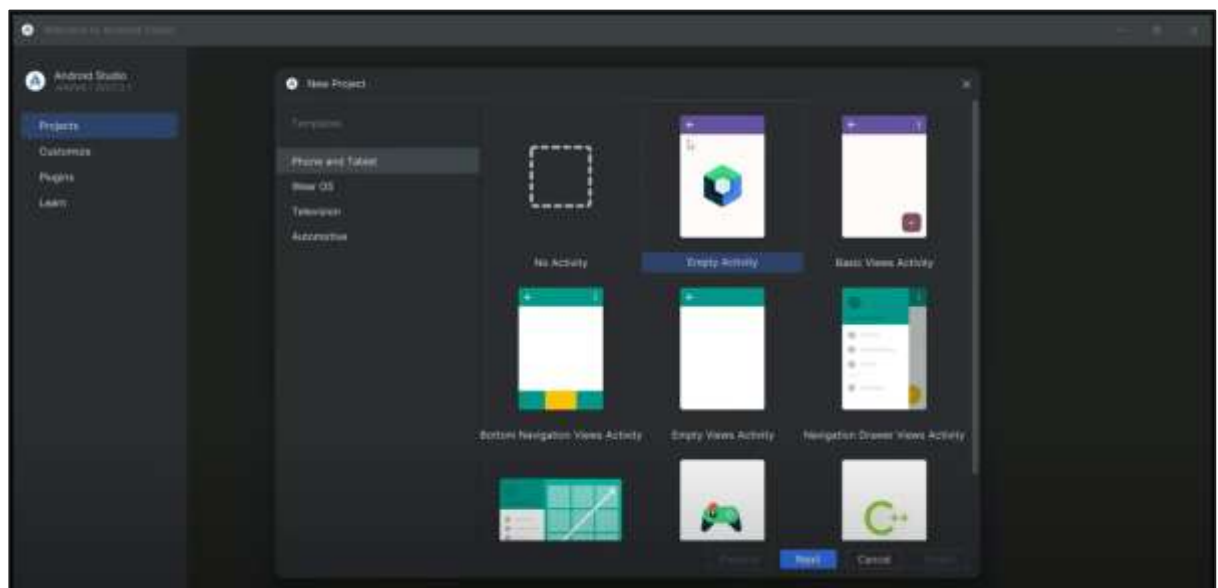

Create a New Project in Android Studio

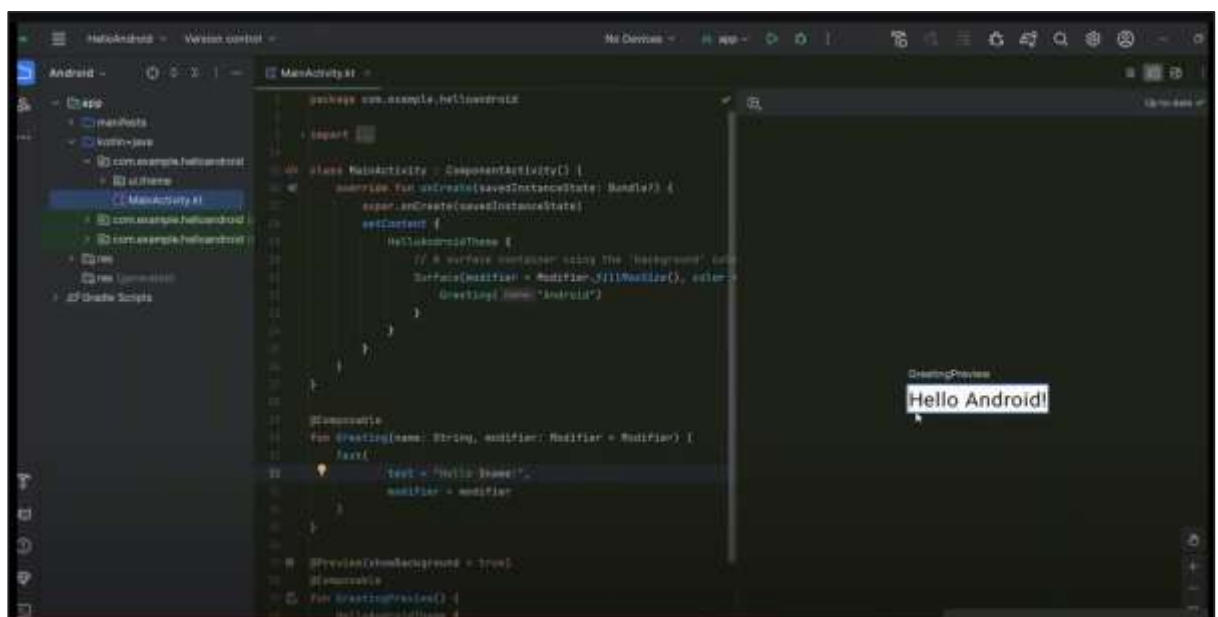

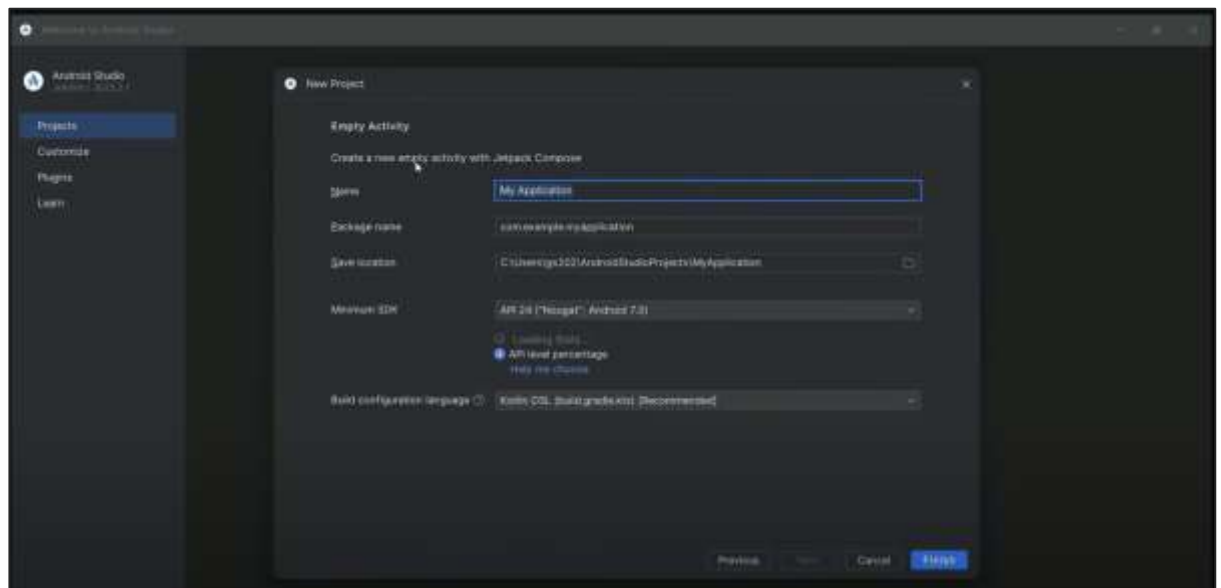

1. Once the Welcome screen appears, click on **New Project** to start building your first project.

2. From here, you can choose a template for your Android app. You can select from multiple presets present depending on your requirements. Click **Next** once selected.

- Now, select a Name, Package Name, and Save location for your project, along with a minimum SDK level. Then click on the **Finish** button to continue.

Quiz – 01

- Create a new Android project in Android Studio, then declare and assign a variable to store Your Name. Display the welcoming message "Hi, Your Name!" on the screen.
